### **DETAILED ACTION**

The restriction requirements in Paper No. 6 (10/01/02) and in Paper No. 9 (1/21/03) are hereby vacated. A new restriction requirement is set forth below.

#### ***Election/Restriction***

1. This application is a 371 of PCT/EP99/07911. For applications filed under 371, PCT rules for lack of unity apply.
2. Restriction is required under 35 U.S.C. 121 and 372.

This application contains inventions or groups of inventions which are not so linked as to form a single inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I. Claims 1-7 and 9-14, drawn to a CD-14 like protein free of O-glycosylation.

Group II. Claim 8, 15-17, drawn to a method of making CD-14 like protein.

Group III. Claims 18-24, drawn to a method of treatment comprising administering CD-14 like protein.

The inventions listed as Groups I-III do not relate to a single general inventive concept under PCT Rule 13.1 because under PCT Rule 13.2 they lack the same or corresponding special technical feature for the following reasons:

The PCT rules define a special technical feature as a feature which defines a contribution over the prior art. The first claimed invention fails to recite such a feature, since isolated proteins having

Art Unit: 1646

no O-glycosylation and at least 70% amino acid homology with human serum CD14 are found in the prior art. U.S. Patent 5,543,303 (Goyert, 8/1996) discloses human serum CD14 protein that is produced in a procaryotic host cell, lacking any glycosylation (see column 2, lines 27-36). Since the first claimed invention lacks a special technical feature, the other claimed inventions cannot share a special technical feature with the first claimed invention. The invention of Group II is patentably distinct from the product of Group I because the product can be made by a materially different method, such as recombinant protein expression. The invention of group III is patentably distinct from the product of Group I because the product can be used in methods that are materially different from the therapy of Group III, such as in the production of antibodies. The methods of Group II and III are patentably distinct because each recites method steps not required by the other, and the search of both methods in one patent application would result in an undue search burden.

2. Claims 19 and 23 are generic to a plurality of disclosed patentably distinct species comprising the list of diseases recited in the claims. Applicant is required under 35 U.S.C. 121 to elect a single disclosed disease, even though this requirement is traversed.

Should applicant traverse on the ground that the different diseases are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the diseases to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Art Unit: 1646

Applicant is advised that the response to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 C.F.R. § 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a diligently-filed petition under 37 C.F.R. § 1.48(b) and by the fee required under 37 C.F.R. § 1.17(h).

3. This application claims an isolated protein which is a variant of CD14 (WO 98/22580, on page 3). This application fails to recite reference sequence disclosures that are encompassed by the definitions for nucleotide and/or amino acid sequences set forth in 37 CFR 1.821(a)(1) and (a)(2). This application fails to comply with the requirements of 37 CFR 1.821 through 1.825 for the reason(s) set forth on the attached Notice To Comply With Requirements For Patent Applications Containing Nucleotide Sequence And/Or Amino Acid Sequence Disclosures. Applicant must comply with the requirements of the sequence rules (37 CFR 1.821 - 1.825) before the application can be examined under 35 U.S.C. §§ 131 and 132.

Applicant is given ONE MONTH from the mailing date of this communication within which to comply with the sequence rules, 37 CFR 1.821 - 1.825. Failure to comply with these requirements will result in ABANDONMENT of the application under 37 CFR 1.821(g). Extensions of time may be obtained by filing a petition accompanied by the extension fee under the provisions of 37 CFR

1.136(a). Direct the reply to the undersigned. Applicant is requested to return a copy of the attached Notice to Comply with the reply.
